

## AIREZ LEAK™

Liquid Event Awareness & Knowledge

# Find the leak.

Leak rope, spot sensors, flow sensors — and cameras or thermal where appropriate — working as one aware system.

### INSTEAD OF:

“Water  
sensor alarm.”

#### AIREZ LEAK™ CAN UNDERSTAND:

-  Leak rope triggered
-  Water-flow anomaly
-  Location
-  Visual & thermal context

→ Probable active leak — Mechanical Room 2

A water alarm tells you something happened. AIREZ LEAK™ tells you what, where, and how fast it is moving — fusing leak rope, spot, and flow sensing with visual and thermal context into situational understanding your team can act on immediately.

**Sense. Locate. Understand. Contextualize. Notify.**

## From signal to situation.

One sensor can beep. AIREZ LEAK™ correlates every sensor into a single probable-cause assessment with a location, so the first person on scene already knows where to go.

#### LEAK ROPE SENSING

continuous linear detection along pipes, walls, and floors

#### SPOT SENSORS

point detection under equipment, drains, and sumps

#### FLOW MONITORING

water-flow anomaly detection across the building

#### VISUAL CONTEXT

camera confirmation where appropriate

#### THERMAL CONTEXT

thermal signatures for hidden or spreading moisture

#### LOCALIZED ALERTS

probable cause and location, not just an alarm

Sense

Correlate

Locate

Assess

Notify Human Teams

Every event ends with your people informed and in control.

**One prevented water event can pay for the entire deployment.**
